smart project delivery

Greenfield Mine Development

Engenium has significant experience in Greenfield mine development. Through our expertise, we have helped junior miners and emerging producers to fast track their projects into production. By partnering with us you will receive the best possible outcome for your project. We can expertly review and analyse your projects needs and provide an outcome which increases the value of your assets, allowing you to continue with further development of your project, or provide the best business case to seek additional funding. Our work provides you with the leverage to negotiate with development partners.

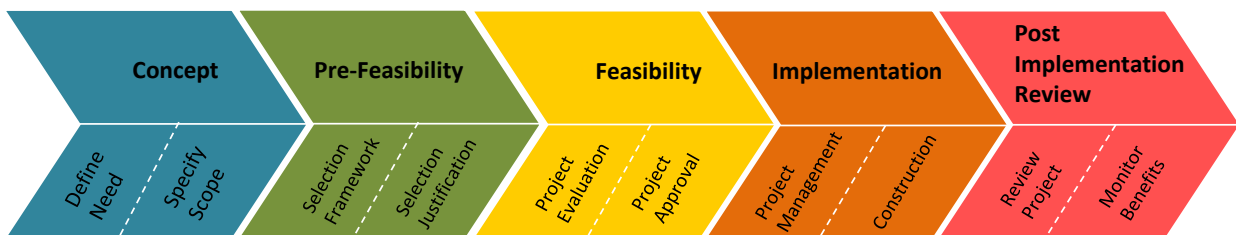

Key Service Advantages

- Fast track your project into production without compromising on the detail, helping you to quickly achieve the transition from explorer to producer.
- Identify the most realistic project development business case, providing you with the most cost effective production solution with the highest revenue generation.
- Achieve a solid business case to negotiate with development partners and raise funding.
- Increase the value of your assets by allowing us to expertly review and analyse your projects needs and requirements.

Our Expertise

Engenium offers a complete Greenfield mine development service including metallurgical testwork and process engineering, scoping and feasibility studies, detailed design, contracting, procurement and construction management.

We have the experience, industry knowledge and business relationships to assess, select, define and implement a practical and realistic project development business case. As a result, we have an excellent reputation in the industry for iron ore, manganese, mineral sands, copper, diamonds, coal, gold and other precious and base metals.

Delivering Value. Delivering Results.
